# INSTRUCTIONS:

* ONLY FOR REFERENCE. WE EXPECT YOU TO CREATE YOUR OWN CASTLE.

Create a new project by cloning the base p5.js project
https://github.com/whitehatjr/p5.play-boilerplate

Using the knowledge you have acquired from class 23, create a castle of sticks and stones.

Use rectangles, squares or any other shapes that help you create your ideal fortress.

You can refer to the p5.js library documentation for all the shapes.

Upload your project on GitHub and create a GitHub page.

Share the page link with us.

REMEMBER... Try your best, that's more important than being correct.
After submitting your project your teacher will send you feedback on your work.

DID YOU KNOW?
The first word spoken on the internet was "lo". It was supposed to be "login" but the computer crashed after the first two letters.
